## **1. Description**

This project will help users to identify and visit the top places in the area of Skopje. There will be a wide range of locations to visit, including landmarks, monuments, cafes, and restaurants. Each of the offered destinations will have a description that the user may use to decide whether or not they wish to visit it. The recommendations will be based on the user's current location, which means that all of the locations will be within a specified radius of the user, which he or she can change.

## **2. Functional Requirements**

2.1 The application will display all hotels, restaurants, cafes and tourist attractions as well as all the most famous land marks within Skopje.

2.2 By using the user's location, the application will determine which location is the closest and will recommend it to the user.

2.3 The recommended locations will have a description which will be displayed to the user.

2.4 The description will have pictures, opening and closing time, exact location by street name and number as well as a rating if they are available in the stored data sets.

## **3. Non-functional Requirements**

3.1 In order for users to use the services of this app, they will have to create an account and be logged in beforehand.

3.2 The application will not share the user's location with any entity outside the application.
